

APPENDIX B: TRAVEL DEMAND MODEL AND SOCIOECONOMIC DATA

MODEL DEVELOPMENT:

The model used for the traffic forecasting for the South West Volusia Regional Transportation Study was the Central Florida Regional Planning Model (CFRPM v4.5) with network and ZDATA changes to mirror the next version of the CFRPM (v5.0). The V4.5 model has a base year of 2000 and a horizon year of 2025. The model inputs for both years (2000 and 2025) were reviewed and evaluated. The network for the base year was verified for accuracy against the concurrency list. In addition, some additional facilities in Orange City and DeBary area were added to the network upon request of the respective study partners. Missing segments were added and the link attributes such as number of lanes, facility type, etc., where inaccurate were corrected. The base network for SWV Study is an Existing plus Committed network for 2015 (the interim model year) and 2025 models. Table B-1 lists the network changes for the 2025 network.

Between CFRPM v4.5 and CFRPM v5.0, several TAZs within the study area were split to enhance the network and more realistically replicate the trip distribution and site access as included in CFRPM v5.0. The updated zdata provided by Volusia County was incorporated into the SWV study model. The socio-economic data for 2000 and 2025 were interpolated to develop zdata for the interim year 2015. The zdata1 and zdata2 files are shown in Tables B-2 and B-3, respectively. Table B-4 displays the “No-Build” scenario for 2015, while Table B-5 displays the “No-Build” scenario for 2025.
