

# Horse Owners Contact Mosquito Control When Classic Signs of EEE are Observed

Horse Owners EEE is a reportable disease but mosquito control doesn't get the information until weeks after infection has occurred. Veterinarians are hesitant to call due to patient confidentiality. Mosquito control will trap mosquitoes in the area and determine if they are capable of carrying the disease which can transpose into humans.

## Classic Horse Infection Signs Include:

**Unsteadiness**

**Erratic Behavior**

**Marked Loss of Coordination**

**Seizures**

**Followed by death in 48 -72 hours**

It is up to you to call  
**MOSQUITO CONTROL**

**386-424-2920**

Do not call if you only observe mosquitoes on your livestock. They must be showing signs of the disease. Please keep your horses vaccinated and take precautions for external parasites.

Vaccines are available for horses but not humans. Vaccinate your horse(s) according to your veterinarian's recommendations.
