

**Implement road and drainage improvements within the IRL area  
(cost estimate \$ 750,000)**

This project includes paving existing dirt roads (County Line Road, County Line Ditch Road and Stacy Grove Road) and providing water quality improvements to the ditch/canal system draining into the Indian River Lagoon. The project would reduce the pollutant loading from the 93-acre contributing basin within the Indian River Lagoon by reducing the particulate matter that erodes from dirt roads and by installing ditch checks in the ditch/canal system that would trap any discharged particulate matter and allow removal of the material prior to discharge into the Indian River lagoon. Reducing the stormwater pollutants will result in improved quality of the stormwater discharged to the Indian River Lagoon.
